

Product data sheet

crobber Y-A

The antibac drive board

Product description

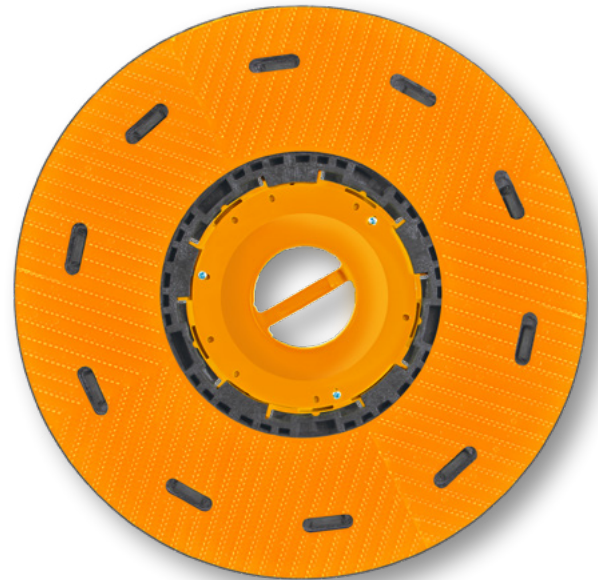

Drive board with antibacterial effect. Recommended for all commercially available pads, especially for textile/microfiber pads. From a minimum thickness of 12 mm.

A special plastic mixture of the drive board body and the harpoon drive face prevent bacteria and germs from taking hold. Both elements are permanently welded together without gaps using our patented laser process.

The innovative hook geometry guarantees a secure hold of the pads while releasing them gently.

The antibac drive board crobber Y-A is supplied as a set with the matching cro-connect and cro-lock, also in antibacterial design.

The cro-connect forms the connection to the machine. The cro-lock secures the pad when lifting.
